FROM M1

Understanding What We Have (Data Collection):
Our system is like a big closet where we keep a list of all the clothes. For every piece, we know what it's called, what it feels like, the type it is, and what color it is. Each piece of clothing also has a photo with a special number, so we know exactly which photo shows which piece of clothing. We generated our data from ERD.

Figuring Out What's Cool (Analytical Technique):
Our system is smart—it watches what clothes people are talking about and which ones they're excited about. It's like noticing popular things. Then, our system makes a list of the clothes everyone will probably want to wear next.

How You See It (API Interface Look):
Our website is a place where you can find out about the latest fashion. It's like asking a friend, "Is this cool to wear?" You type in what you're looking for, and we tell you if it's something a lot of people like, what colors are in, and which brands are making waves. It's easy and quick, like asking a friend for fashion advice.
